RealityMobile®

Reality Mobile® – Instantly There™

Founded in 2003, Reality Mobile provides enterprise organizations and government agencies with real-time mobile collaboration.

Reality Mobile's RealityVision® solution is your **Force Multiplier** Creating a multi-directional common operating picture by sharing real-time events from the "edge" to SME's and Senior Leadership anywhere in the world.

RealityVision® - See What You've Been Missing™

RealityVision streamlines the communications process between field personnel, operations center and senior management. Any critical information you can see in the field or on a PC screen can be shared instantly and securely with everyone who needs to see it.

By providing applications that enhance an organization's situational awareness through the sharing of live video, mission critical data and GPS tracking, Reality Mobile has developed the missing link between tactical teams, processes, technologies and geographies.

- **Enhanced Decision Support** - Instead of relying on a radio call you can see live video and events as they unfold. With enhanced video awareness, vital missing information can be sent from first responders and tactical teams to the home office or other team members in the field in real time.

- **Common Operating Picture** - Managers and SME's can see what the tactical team sees (and vice-versa) to help ensure the right decisions are made the first time.

- **Collaboration** - All team members are instantly brought to the same level of understanding

- **Increase Operational Tempo** - The mission can make more timely and productive decisions regarding the use of its fielded assets.

Real-time streaming video

Video sharing and control

Silent alarm

Multi-push data delivery

Remote command & control of devices

Screencasting

GPS tracking

Government Applications

No other product on the market offers the RealityVision system's combination of dynamic video creation and sharing, GPS, command and control and screen-sharing features. The system's features are so powerful it is changing the way the US and foreign governments conduct surveillance, deploy field teams and respond to emergencies.

In the government sector, we are bringing RealityVision to numerous organizations, including those responsible for:

- Blue force tracking
- Border and port security
- Counterterrorism
- Critical national infrastructure protection
- Emergency first response
- Intelligence collection and dissemination
- Law enforcement
- Logistics and maintenance

"The greatest benefit of the (RealityVision) system is the ability to quickly share information among team members regardless of location. This capability may be leveraged in a variety of ways including remote identification of suspicious objects and as a situational awareness application during and emergency situation."

— US Department of Homeland Security
   (Operation RealEyes)

Input Sources

- Camera Feeds (IP, analog, cell phone)
- Anything you can plug into a TV
- Anything on your PC screen
